Subject: Re: Water Tower Questions

Wanted to reach out and provide an update on the proposal changing. This just finalized today, so I apologize for any short notice. This all started materializing after my initial emails with you.

We are now working with a company to put weather camera and monitoring systems in. This will have a lot more data gathered, the cameras will be shown and part of the Hazcams network. View an example here <https://hazcams.com/station/tulsa-ok-us-005>. It will include the full suite of live weather data and the live camera feed.

We can still prevent the camera from looking down at the neighboring houses/yards/school/playground but with this system the camera will move to look at nearby storms automatically - so we don't have to interact with it manually.

They are trying to rush ship me a full unit for display at the council meeting Monday.

This system will have an extra component being the weather sensor stick.

I look forward to discussions with the council and community, and hope that the unit comes in on-time.
